Critical Thinking

Overview: This session will aim to develop critical thinking skills by encouraging students to analyse, evaluate and critique information produced by artificial intelligence. The session will involve a range of interactive group activities designed to encourage students to 'think critically' about the origin of information, credibility and bias and consider how this applies to education and day-to-day life.

Learning Objectives:

By the end of the workshop, students will be able to:

- Explore the importance of critical thinking.
- Investigate how critical thinking can help us to interpret information, particularly information generated by artificial intelligence.
- Gain an understanding of how critical thinking can aid with studies at school and university, in employment and throughout life.
