

MSc Psychology Programme Handbook

**The British
Psychological Society**
Accredited

June 2024

Version 22

Introduction to the Programme

A very warm welcome to the MSc Psychology degree programme at Arden University. I'm Dr. Judith Roberts, a Senior Fellow of the Higher Education Academy (SFHEA) and qualified Clinical Psychologist who is your Programme Leader. I have worked as both an academic and a practitioner psychologist in a range of settings including the NHS. My research and clinical interests include anxiety, therapeutic interventions, older adult psychology/mild cognitive impairment/dementia, rehabilitation, and learning disabilities.

Congratulations on taking an exciting step towards a highly rewarding career within this Psychology! The whole course team and I are looking forward to working with you across your learning journey. The MSc Psychology programme is made up of 7 core modules as follows:

- Research Methods
- Social Psychology
- Behavioural Neuroscience
- Individual Differences & Mental Health
- Lifespan Development
- Cognitive Psychology
- Advanced Research Project

An outline of the content of each of the modules and the assessment methods used can be found in the Module Definition Form section of iLearn. Please note a 20-credit module is equivalent to 200 hours of self-guided learning.

Within this handbook you can find out more about the learning outcomes of the programme and how the course aligns with wider academic and professional bodies. Across your studies you'll have the opportunity to engage with a wide range of extracurricular activities, such as virtual social activities, careers related events and contribute to student led projects such as the student conference.

We're so glad that you have decided to join our vibrant learning community and we can't wait to support you throughout your studies.

Dr Judith Roberts

Accreditation

We are extremely proud that our MSc in Psychology at Arden is accredited by the British Psychological Society. Graduating successfully from this course, including achieving an overall mark of at least 50% and passing the Advanced Research Project, will provide you with Graduate Basis for Chartered Membership (GBC) from the British Psychological Society (BPS).

the british
psychological society
promoting excellence in psychology

The British Psychological Society (BPS) is the representative body for psychology and psychologists in the UK. They are responsible for the development, promotion, and application of psychology for the public good. Arden University's MSc Psychology programme is accredited by the BPS and therefore successful completion of the full MSc Psychology degree will enable students to take a significant step towards becoming a Graduate Member of the BPS. See more details by following this link Graduate membership (GMBPsS) | BPS , or speak to your programme lead. Further details can be found on the BPS website <http://www.bps.org.uk/>

Course Structure

The programme is made up of the seven core modules listed below, with all modules having as their prerequisite the Research Methods module. This is so that students become familiarised with the highly empirical nature of psychology first – it underpins all other modules.

Programme Structure			
Level 7			
Module Code	Module Title	Credits	Module Type (Core/Option)
RES7002	Research Methods	20	C
PSY7002	Social Psychology	20	C
PSY7005	Behavioural Neuroscience	20	C
PSY7003	Individual Differences and Mental Health	20	C
PSY7004	Lifespan Development	20	C
PSY7001	Cognitive Psychology	20	C
RES7003	Advanced Research Project	60	C

Since students can take up to two modules at the same time on enrolment, the Research Methods module may be taken at the same time as Social Psychology. However, it is advised that if you are balancing multiple demands to release only one module initially whilst you are getting used to studying using the Arden systems. The Research Methods module is the first module students will undertake. This is so that students become familiarised with the highly empirical nature of psychology first – it underpins all other modules. The final module is the Advanced Research Project module, which has 120 credits from the other modules as its prerequisite. After Induction, the sequence of modules is:

So after Induction, the sequence of modules will be:

(*A prerequisite module must be studied before proceeding to the module for which it is a prerequisite, but students are not required to have a ratified pass grade before proceeding.)

Embedded within the lessons are links to further reading and appropriate psychology resources. Feedback within the learning material is provided to allow students to check their understanding with that of the tutor. Additionally, group learning activities direct students to the tutor-facilitated discussion forums where they engage in discussion with their peers and receive formative feedback from the module tutor.

Each of the 20 credit modules provide students with an understanding of key theoretical and methodological issues, debates and academic-informed literature in psychology. Teaching and learning methods adopted are transferrable across modules and are similar across modules and include online class discussions, exercises, case studies, and group discussions.

For each subject being taught, a programme of structured online learning activities using both formative and summative assessment is applied. The emphasis is on action learning through the mediation of the module leader for each module.

Throughout the modules, distance learning material will provide key concepts in psychology, while students will be encouraged to interact with each other through online discussion groups via a dedicated virtual learning platform. The distance learning tutor will provide support and guide students through the module with a structured study plan.

The delivery of content will involve tutor led inputs (such as narrated PowerPoint presentations, video and written case study material) and student led inputs (such as online live seminars, and interactive formative tests). The student will be encouraged to draw upon their own professional experiences and thereby better contextualise some of the theoretical content of the module. Students will also be given support specific to the assignment through online sessions.

All empirical research carried out by students as part of their assessment will require ethical approval before data can be collected. The module leader will signpost students to how ethical approval can be granted. Arden University also has a Research Ethics Committee, comprising of senior members of the Arden University academic community with experience of conducting research. For the Advanced Research Project, students will be required to submit a research proposal that meets the standards of the BPS code of ethics, and will not be allowed to recruit or test any participants until the project has been approved by REC and the student if formally notified of such.

Ethical standards in research with human participants is an important part of becoming a professional psychologist and students should familiarise themselves with the BPS Code of Human Research Ethics.

The British Psychological Society (BPS) & Health and Care Professions Council (HCPC)

Students registered on the programme are eligible to become student members of the British Psychological Society and we encourage students to actively engage with the society. The BPS exists to promote excellence and ethical practice in psychology (in educational and professional settings). It aims to be the main society for psychology, promoting and advancing the discipline. It aims to make psychology accessible to all who seek it. The BPS supports career options and professional development, and tries to ensure the highest standards in education, training, and practice. It is also the public face of professional psychology and promotes the influence psychology can have in society. The BPS has several subdivisions and organises numerous conferences throughout the year. It is also a publishing house and produces key handbooks for psychologists, including those related to the ethical standards for psychologists.

The BPS provides a rich source of careers advice for students. For example, it has developed an interactive online tool for discovering different possibilities for careers in psychology, see <http://careers.bps.org.uk/>.

The BPS has several levels of membership. Chartered Membership (CPsychol) reflects the highest standards of psychological knowledge and expertise; Graduate Membership (MBPsS) is for psychology graduates who wish to be recognised as part of the psychological community; Student Membership is for students registered on an accredited undergraduate or postgraduate programme. For more information about student membership, see <https://beta.bps.org.uk/join-us/membership/student-membership>.

In terms of the regulation of psychology, statutory regulation was introduced in 2009 and the HCPC (Health and Care Professions Council) register of practitioner psychologists was set up. The BPS works with the HCPC in raising awareness of the importance of recruiting and using HCPC registered psychologists in seven professional titles, Clinical Psychologist, Health Psychologist, Counselling Psychologist, Educational Psychologist, Occupational Psychologist, Sport and Exercise Psychologist, and Forensic Psychologist. Hence, The HCPC approves the following routes to statutory regulation: Clinical - Professional Doctorate, Counselling - Professional Doctorate or equivalent, Educational - Professional Doctorate or equivalent, Forensic - Masters degree (with the award of the Society qualification in forensic psychology or equivalent), Health - Masters degree (with the award of the Society qualification in health psychology or equivalent), Occupational - Masters degree (with the award of the Society qualification in occupational psychology, or equivalent), Sport and exercise - Masters degree (with the award of the Society qualification in sport and exercise psychology, or equivalent).

Accreditation with the British Psychology Society - minimum requirements for Graduate Basis for Chartered Membership (GBC)

In order to be eligible for the GBC, you must pass the empirical psychology project with 50% or over and gain an overall pass mark of at least 50% for the whole course.

EBSCO Online Library

Arden University subscribes to EBSCO information services, which provides a library of database services (academic journals, magazines, reviews, and so on). For psychology programmes, we also subscribe to the APA’s Psyc collection (PsycINFO, PsycARTICLES, PsycBOOKS, PsycTESTS). We also subscribe to Bibliu – an online platform housing a vast number of book, textbooks and materials to help support you during your studies.

The development team has ensured that all key texts and many texts within the additional reading category are available via our online libraries. In addition, Arden has invested in ensuring that texts are as current as possible. Where possible, key and additional texts have been identified that run across modules.

Transferable Skills

Arden University has defined a set of Graduate Attributes, which reflect what employers seek in graduate appointments. These are explained in the Programme Specification, included later in this handbook. The Graduate Attributes are university-wide and so apply to all disciplines.

In addition, the British Psychological Society (BPS) emphasises the importance of transferable skills for psychology students specifically. The BPS’s transferrable skills map against Arden University’s Graduate Attributes as follows:

BPS Standards for Masters Programmes in Psychology	Arden University Graduate Attributes
Communicate effectively	Effective Communication Communicate effectively both, verbally and in writing, using a range of media widely used in relevant professional context. Be IT, digitally and information literate.
Demonstrate numerical reasoning skills	Discipline Expertise

	Knowledge and understanding of chosen field. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change.
Be computer literate	Effective Communication Communicate effectively both, verbally and in writing, using a range of media widely used in relevant professional context. Be IT, digitally and information literate.
Retrieve and organise information effectively	Discipline Expertise Knowledge and understanding of chosen field. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change.
Recognise what is required for effective teamwork and articulate their own strengths and weaknesses in this regard	Professional Skills Utilising the skills to perform effectively within the professional environment. Work within a team, demonstrating interpersonal skills such as effective listening, negotiating, persuading and presentation. Be flexible and adaptable to changes within the professional environment.
Take responsibility for their own learning and skill development	Lifelong Learning Manage employability, utilising the skills of personal development and planning in different contexts to contribute to society and the workplace.

Pace of Study

Student Loans Company Funded Students

If you have been granted a postgraduate loan from the Student Loans Company, you must progress at an appropriate pace to complete within two years. Arden University is required to make annual reports to the Student Loans Company regarding your progress. If you fall behind, or if you decide you would prefer to study at a slower pace, you may transfer to the Flexible Distance Learning route (see below). However, if you transfer to the more flexible route, you will not be eligible for any continued loan payments from the Student Loans Company.

Flexible Distance Learning Students

If you have chosen the flexible distance learning route and have not received a postgraduate loan from the Student Loans Company, you have the flexibility to plan your own pace of study. Postgraduate degrees usually take around two to three years to complete depending on how many modules you study each year. In order to achieve this it is recommended that you aim to complete at least 60 credits each year, equivalent to three 20-credit modules. You will have a maximum of five years to complete the programme (from the date you first started).

Arden University Assessment Regulations

Students will be assessed in accordance with the standard Arden University assessment regulations which can be found on the Arden University website <http://arden.ac.uk/>

PROGRAMME SPECIFICATION

1. Target Award	MSc
2. Programme Title	MSc Psychology
3. Exit Awards	PG Diploma in Psychology (120 credits) PG Certificate in Psychology (60 credits)
4. Programme Leader(s)	Dr Judith Roberts
5. Delivery Modes	Online distance learning Blended learning
6. Start date	October 2017
7. Programme Accredited by <i>(PSRB or other, if applicable)</i>	Graduate Basis for Chartered Membership (GBC) from the British Psychological Society (BPS) on successful completion of the graduate programme (average mark of 50% or above). The alternate exit routes (PG Diploma and PG Certificate) will not confer students with GBC.
8. UCAS Code <i>(If applicable)</i>	
9. Relevant QAA subject benchmark statement	<ul style="list-style-type: none"> • Subject benchmark statement: Psychology (2016) • Characteristics Statement: Master's Degree (2015)

10. Programme Aims

The aim of this MSc Psychology Conversion is to provide students with knowledge and understanding of key issues in each of the core areas in psychology, so that they may obtain Graduate Basis for Chartered Membership (GBC) from the British Psychological Society (BPS). This membership is essential for pursuing a career in one of the recognised psychology professions.

Online teaching materials are derived from established academic research in the core areas of psychology in order to develop specialist knowledge, critical powers of analysis, reflection and the further development of interpersonal skills in preparation for further training in one of the recognised professional pathways.

By the end of this programme, students will be able to carry out quantitative and qualitative data analyses and use statistical software to analyse data. They will be able to design and run psychology experiments with detailed understanding of ethical issues, and to gather and interpret data. This will culminate with an advanced research project on an agreed topic. On graduation, they will have gained the necessary knowledge and understanding in the core areas of psychology and be able to apply their research skills across these core areas with an understanding of the ethical guidelines around human participation in research.

In particular, the purpose of the programme is to provide graduate students with:

- The opportunity to obtain a degree award that would make them eligible for Graduate Basis for Chartered Membership (GBC) of the British Psychological Society (BPS);
- Knowledge and understanding of the core psychology subject areas: Social psychology, cognitive psychology, biological psychology, neuroscience, developmental psychology, individual differences, mental health, and research methods (quantitative and qualitative), including applied fields;
- A scientific understanding of mind, brain, behaviour and experience and of the complex interactions between these;
- Multiple perspectives on the discipline in a way that fosters critical evaluation;
- An understanding of the role of empirical evidence in the creation and constraint of theory and also in how theory guides the collection and interpretation of empirical data;

- An opportunity to conduct research independently;
- An opportunity to develop knowledge leading to an ability to appreciate and critically evaluate theory and research findings

The subject benchmarking places a particular emphasis on conceptual and historical issues in psychology and these will be taught in every module, so that each module is introduced with the main history of the approach, key issues that have driven it, key studies and research approaches, and contemporary issues.

Applications of psychology will be introduced into the syllabus on all modules, making the content both potent and of more interest to students. As students consider topics for their Advanced Research Project, they will be encouraged to consider issues related to prospective careers they may wish to pursue.

We will also introduce global themes into lessons and this will achieve two things: Firstly, it will avoid a Western-centrism in content which is important given that our students will be studying from all over the world and secondly it places an additional of focus on how psychology can be and is being applied to problems in different regions and cultures of the world.

11. Intended programme learning outcomes and the means by which they are achieved and demonstrated		
MSc (180 credits)		
11a. Knowledge and understanding	The means by which these outcomes are achieved	The means by which these outcomes are demonstrated
<p>A1. Demonstrate a critical understanding and depth of knowledge of the core areas of psychology and the ability to assess their relevance in the understanding of the contemporary world</p> <p>A2. Critically understand the main theoretical perspectives and debates in psychology in their historical and contemporary contexts in a reflective way</p> <p>A3. Identify, research, critically summarise and apply key concepts in psychology to a range of psychological issues</p> <p>A4. Evaluate and apply different methodological approaches to the study of mental life and behaviour</p> <p>A5. Conduct an independent research project at a postgraduate level with a reflective understanding of ethical issues in human participation in research</p>	<p>Learning and Teaching methods and strategy:</p> <p>Acquisition of knowledge and understanding (A1 – A5) at all levels is through an integrated learning and teaching pedagogy that includes both asynchronous and synchronous activity.</p> <p>That is:</p> <p>Asynchronous</p> <p>Independent and directed student study, supported throughout by comprehensive online multi-media teaching materials and resources accessed through our VLE guided group/project-based work.</p> <p>Discussion forums where students discuss and critically engage with themes emerging from the materials they engage with, following the posing of questions or propositions, case studies or similar by either tutor or students themselves</p> <p>Podcasts and narrated PowerPoint's</p>	<p>Knowledge and understanding are assessed through in-module assessments of portfolio submissions, draft essays and report-based assignments.</p> <p>Formative assessments are the precursor to the summative assessments. Appropriate and diverse formative assessments are provided for students and are communicated to them via a clear overview to be found in the assessment brief for each module.</p>

	<p>Synchronous</p> <p>Online seminars facilitated by VOIP's where theory and practice are integrated.</p> <p>Based upon the profile of our typical student body, our strategy enables students to engage with a variety of learning tools that best meet their learning styles, overall objectives and personal circumstances.</p> <p>Independent study is the cornerstone of the learner experience supported by engagement with the specialist tutor and peer engagement.</p> <p>There is a requirement for written work at all levels including reports, essays, practical tasks, reviews, and so on, and our formative assessment policy informs how feedback is supplied by tutors at the draft assessment phase.</p>	
11b. Intellectual (thinking) skills	The means by which these outcomes are achieved	The means by which these outcomes are demonstrated
<p>B1. Read and review psychological research from an informed and critical perspective</p> <p>B2. Critically distinguish between different research approaches in psychology and their application, based on relevant theoretical,</p>	<p>Intellectual skills (B1 – B4) are developed throughout the programme by the methods and strategies outlined in section A, above.</p> <p>Intellectual development (B3 & B4) is further encouraged via formative assessment tasks including set briefs, in-module activities, case</p>	<p>Intellectual skills are assessed through a combination of in-course formative exercises and summative assignments, including the submission of portfolios, journal article reviews, statistical analyses, qualitative judgements, and research reports/dissertation.</p>

<p>philosophical, practical, statistical, and methodological reasoning</p> <p>B3. Assimilate data and evidence to support a reasoned argument to explain some aspect of human mental life and behaviour</p> <p>B4. Display competence in the execution of an individual research project and the critical evaluation of its value in addressing some aspect of theory and research method in psychology</p>	<p>studies, self-initiated briefs, and discussion with tutors and peers (in online forums/debates).</p> <p>Specific modules support the development of quantitative and qualitative analysis, and the development of criticality and self-reflective skills. In addition, the student’s thinking skills will be evident in a summative assessment process which requires and rewards learners for the demonstration of creative thinking and problem solving, analysis, judgement and self-reflection in the development of contextually relevant solutions, and a willingness to explore and engage with a range of media.</p> <p>Throughout, the learner is encouraged to develop intellectual skills further by undertaking further independent study and research.</p>	
<p>11c. Practical skills</p>	<p>The means by which these outcomes are achieved</p>	<p>The means by which these outcomes are demonstrated</p>
<p>C1. Develop personal skills to increase the effectiveness of their work and time management strategies.</p> <p>C2. Collect, evaluate, and apply information from a variety of sources in order to address questions regarding human psychology.</p>	<p>Practical and professional skills (C1-C4) are employed in the production of solutions to real life situations developed through set briefs, exercises and practical activities. The important modern-day skills of gathering evidence, managing projects, interpreting data, compiling reports, provided by specific modules, as are specific inputs with an emphasis upon practical</p>	<p>To support the development of practical skills students must supply worked materials and evidence in support of their assignments. Critical reasoning, good presentation and sound evidence trails in all assignments are rewarded. Assessment briefs include a variety of commercial and geographical contextual setting. Students receive feedback on all activities and</p>

<p>C3. Demonstrate competence in the planning and execution of research to a professional and ethical standard, act autonomously, and demonstrate originality.</p> <p>C4. Communicate arguments, evidence, and statistical information thorough essays and reports in an effective way that is in accordance with discipline-relevant publication guide</p>	<p>functional decision-making skills related to the understanding of human behaviour in a variety of different contexts.</p> <p>Practical skills are further developed and integrated through a series of in-course online activities and projects intended to test skills acquired. Group forums provide opportunities to discuss ideas, progress, the work of others and the strengths and weakness in the work presented and particularly support the development of C4. Activities are provided so that students can work independently to consolidate their knowledge and grasp of practical skills. The in-course activities and assessment process in the latter part of the programme particularly emphasise the acquisition of C3.</p>	<p>assignments which includes practical examples for improvement in the application of theory to practice to help them improve both aspects of their skill base.</p>
<p>11c. Transferrable skills</p>	<p>The means by which these outcomes are achieved</p>	<p>The means by which these outcomes are demonstrated</p>
<p>D1. Critically reflect to support enhanced learning, self-awareness and interaction with others</p>	<p>(D1-D4) Personal responsibility becomes an increasingly important skill as students progress, culminating in the writing of the Advanced Research Report.</p> <p>As the programme progresses work becomes more complex and students are tested on their abilities to respond positively to feedback from a</p>	<p>To develop transferable skills all assignments must meet time deadlines and word count guidelines. All assessed work must be submitted independently even where group activity has been an element of the process. Students must take responsibility for their own work. All assignments require students to adopt a spirit of critical enquiry and self-reflection which is</p>

<p>D2. Undertake effective communication and presentation skills to support or strengthen arguments and analysis</p> <p>D3. Use CIT to analyse and communicate data in an effective way and in a variety of settings</p> <p>D4. Undertake independent, ethically sound research through the acquisition of skills relevant to the context of human behaviour</p>	<p>variety of audiences, as well as to manage increasingly large workloads. Students are required to complete a number of assignments and a research output that rewards independence originality, and critical enquiry, and which further enhance communication and self-reflective skills.</p>	<p>rewarded in marking guides. These guides are shared with students.</p>

Exit Awards: Programme Outcomes

Exit Award	Knowledge & Understanding	Intellectual Skills	Practical Skills	Transferrable Skills
Post Graduate Diploma (120 credits)	A1, A2, A3	B1, B2, B3	C1, C2, C4	D1, D2, D3
Post Graduate Certificate (60 credits)	A1, A3	B1	C2	D1, D2

12. Graduate Attributes and the means by which they are achieved and demonstrated

The concept of the Arden University Graduate, based upon the definition of 'graduate attribute' by Bowden *et al* (2000) has been developed around 6 attributes.

Lifelong Learning: Manage employability, utilising the skills of personal development and planning in different contexts to contribute to society and the workplace.

Reflective Practitioner: Undertake critical analysis and reach reasoned and evidenced decisions, contribute problem-solving skills to find and innovate in solutions

Professional Skills: Utilising the skills to perform effectively within the professional environment. Work within a team, demonstrating interpersonal skills such as effective listening, negotiating, persuading and presentation. Be flexible and adaptable to changes within the professional environment

Discipline Expertise: Knowledge and understanding of chosen field. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change.

Responsible Global Citizenship: Understand global issues and their place in a globalised economy, ethical decision-making and accountability. Adopt self-awareness, openness and sensitivity to diversity in culture.

Effective Communication: Communicate effectively both, verbally and in writing, using a range of media widely used in relevant professional context. Be IT, digitally and information literate.

The means by which these outcomes are achieved and demonstrated

All seven attributes are relevant to this programme and they will be developed throughout Level 7 of the MSc award where they are integrated into the modules.

Mapping

Module	Graduate Attribute
Research Methods	Professional Skills: Utilising the skills to perform effectively within the professional environment. Work within a team, demonstrating interpersonal skills such

	as effective listening, negotiating, persuading and presentation. Be flexible and adaptable to changes within the professional environment.
Social Psychology	Reflective Practitioner: Undertake critical analysis and reach reasoned and evidenced decisions, contribute problem-solving skills to find and innovate in solutions
Behavioural Neuroscience	Discipline Expertise: Knowledge and understanding of chosen field. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change.
Individual Differences and Mental Health	Responsible Global Citizenship: Understand global issues and their place in a globalised economy, ethical decision-making and accountability. Adopt self-awareness, openness and sensitivity to diversity in culture.
Lifespan Development	Lifelong Learning: Manage employability, utilising the skills of personal development and planning in different contexts to contribute to society and the workplace.
Cognitive Psychology	Effective Communication: Communicate effectively both, verbally and in writing, using a range of media widely used in relevant professional context. Be IT, digitally and information literate.
Advanced Research Project	Discipline Expertise: Knowledge and understanding of chosen field. Possess a range of skills to operate within this sector, have a keen awareness of current developments in working practice being well positioned to respond to change

14. Assessment methods and strategies

The assessment process involves both formative and summative elements and is continuing in nature.

There will be a focus on encouraging students to apply their knowledge to practical situations, especially those involving personal and social issues. To put issues in a contemporary context, we focus on issues arising from provocative or ground-breaking journal articles, and issues that arise in the news from time to time (e.g., the experiences of migrants). A significant component of the programme is the Advanced Research Project, and here students will be required to identify a topic of interest to them, which falls within the field of psychology. Students will explore this, and will apply their research to the topic, identify how to evaluate issues using an evidence-based approach, modify theory in the light of new evidence, and put forward recommendations for further research.

The approach to coursework assignments will be to encourage students to apply their knowledge to theoretical and methodological issues in the core areas. Most modules offer some form of formative assessment and this usually involves the student submitting a draft of the work they present as their summative assessment if the work is emailed to the tutor two weeks before the final submission deadline.

Awareness of ethical issues is assessed formatively by requiring students to submit a research proposal that adheres to the ethical guidelines in human research participation. Feedback is given to help guide students on ethical issues, and progression is not allowed until such a proposal is deemed ethically sound.

Summative submissions will all be made via the 'Turn it In' platform. This is one method for plagiarism detection and automatically checks for text copied from other sources, including published articles, websites, and other student assignments previously submitted through this platform.

The assessment designed for each module reflects the intentions of that module and will measure the identified learning outcomes. A variety of assessment strategies will be used to reflect and test the achievement of the learning outcomes. These are detailed within each module and mapped in the table below. Assessment questions are seen to be dynamic and are reviewed quarterly in order to maintain rigour and reflect changes in professional focus and practice.

There is a requirement for written work at all levels including reports, essays, developed plans, reviews of the literature and critiques of individual research articles, and so on, and our assessment policy informs how feedback is supplied by tutors at the formative and summative assessment stage. Critical analysis is encouraged at all levels culminating in an Advanced Research Project.

Module	Assessment	Formative Feedback
Research methods	Empirical Research Project - report based on existing dataset (3500 words)	Feedback on report plan only
Social psychology	Qualitative report (4000 words)	Feedback on 30% of summative assessment
Behavioural neuroscience	Literature review (3500 words)	Feedback on plans only
Individual differences and mental health	Essay (3000 words) based on one case studies	Feedback on essay plan
Lifespan development	Poster (2000 words) Presentation of poster (15 minutes)	Feedback on plans only
Cognitive psychology	Research protocol for a cognitive psychology experimental study (3,000 words)	Approval/sign off of proposal and ethics Feedback on report plan
Advanced research project	Ethics form, Dissertation (12,000 words) or Journal article (7000 words)	Approval/sign off of proposal and ethics Full feedback on report/journal article.

For full feedback on assessments – no intext comments to be provided.
For feedback on plans no more than one page at font size 12.

15. Employability

Entrants to this programme are likely to be in work (be it full or part time) or have just completed a degree on a programme that did not provide them with GBC. In either case, the MSc programme is designed to offer the degree of flexibility required to ensure that even those employed in full time positions have the maximum opportunity to fulfil their programme of study. The programme aims to develop skills, behaviours and knowledge such that graduates can confidently pursue further training in psychology should they wish to develop a career as a professional psychologist.

The degree develops a range of transferrable skills and provides opportunities for these to be evidenced. In particular, the programme provides the opportunity to acquire skills in library research, obtaining volunteers for research, collecting data, data entry and analysis using a statistical package, understanding of statistics and the presentation of statistical information, evaluating ideas critically, taking an evidence-based approach to the evaluation of ideas, the use of information technology in collecting data and analysing data, the use of IT in communication, the use of online survey systems, questionnaire design, report writing using a publication standard, essay writing, and presenting a reasoned argument from an informed position. The advanced research project provides the ability to demonstrate higher level academic skills. Hence, as with most undergraduate degrees in psychology, this psychology conversion MSc will provide students with a broad range of skills that are highly attractive to employers from a wide variety of industries.

Through a range of activities taking place within the School of Psychology students are introduced into the numerous career opportunities that may present themselves after graduation and further study. These include the more 'traditional' professions, such as the clinical psychologist, educational psychologist, health psychologist, counselling psychologist, sports psychologist, as well as the less traditional careers that psychology graduates are equipped to pursue, such as consumer psychologist, market researcher, human resources manager, career adviser, sales and marketing, and so on. Students are encouraged to carry out voluntary work as a way of improving their CV but also as a way of experiencing a field they may wish to consider as a career. We shall provide a list of national and international voluntary organisations during the induction module, but students will be encouraged to seek for themselves local opportunities where they live. Of course, many Arden students will be already employed, so they may be limited in the amount of free time for voluntary work; however, there may be ways in which they could volunteer or get involved in relevant activities in the workplace that would give them relevant experience.

Arden values are embedded within the programme as a whole and these values will be instilled in students as they progress through their studies, thus ensuring that graduating students are fully equipped with highly current, appropriate and ethically sound knowledge, procedures and processes.

The distributed nature of Arden University students makes conventional careers support difficult but the use of the Abintegro provider (online support for the employability and career development needs of our students) allows us to offer a range of support in career development and there are opportunities for students to purchase more specialist support if required.

The addition of embedded graduate attributes adds value to the qualification in terms of providing 'industry ready' graduating students.

16. Entry Requirements

Arden University is keen to ensure that the programme is available to all those who can benefit from it.

Students will enter from one of several routes where they were not eligible for GBC:

- An Honours degree in any subject other than psychology at 2:2 or above
- An Honours degree in psychology not accredited by the BPS at 2:2 or above
- An Honours degree in psychology 3rd class – if the applicant also possesses a masters level degree
- An Honours degree on an accredited psychology programme but where the empirical component of the course was failed and the applicant can evidence completion of an empirical project on a subsequent masters level degree
- An international student who has the equivalent to an Honours degree (as determined by NARIC).
- Where the honours component is not evidenced (ordinary degree) evidence of an empirical research project/dissertation at either UG or MSc Level

These entry requirements are consistent with the BPS's recommendations for an MSc Psychology Conversion programme.

In addition, a maths qualification equivalent to at least a Grade C at GCSE; with mini maths module available.

English language competence equivalent to IELTS 6.5 (no less than 6.0 in any element), where the medium of undergraduate study was not English.

Applications for admission with advanced standing on the basis of the accreditation of prior certificated learning will be considered on an individual basis up to a maximum of 60 credits.

17. Programme Structure

Module Code	Module Title	Credits	Module Type (Core/Option)	Assessment Method
RES7002	Research Methods	20	Core	Empirical Research Report
PSY7002	Social Psychology	20	Core	Qualitative Report
PSY7005	Behavioural Neuroscience	20	Core	Literature Review
PSY7003	Individual Differences and mental health	20	Core	Essay
PSY7004	Lifespan Development	20	Core	Poster and Presentation
PSY7001	Cognitive Psychology	20	Core	Research Proposal with ethics approval
RES7003	Advanced Research Project	60	Core	Ethics application and thesis OR journal article

18. Subject: C800	Select from: Biological Sciences – C8 Psychology
