17. Learning, teaching and assessment methods and strategies

The programme draws upon an eclectic mix of teaching methods and assessment strategies. Teaching strategies and assessments methods are based around blended and online interventions.

Learning and Teaching

In line with Arden University’s “digital first” teaching focus, interventions are enriched and enhanced by the deployment of a range of digital assets including: specialist software, simulations, discussion fora, social media channels, collaborative tools, webinars and e-presentation software.

Teaching is designed to engage and inspire students via a range of innovative activities and retains a “real world” focus using interventions such as contemporary case studies and industry data sets. Teaching is largely student led; learners are expected to take ownership of their own learning journeys, reflect upon the teaching interventions, datasets, case and study materials and act upon tutor feedback as they develop their knowledge of and skills in business management.

Teaching activities may require students to work both collaboratively and individually, analyse case studies, participate in simulation exercises, devise solutions to “real world” problems by

producing “work products”, exchange peer to peer feedback and reflect upon their own work experiences (where applicable). Teaching is enriched by a programme of industry guest lectures.

Assessment

The assessment strategy similarly centres on a strong alignment with real world organisational and business practice and embraces a range of assessment methods including work related products, presentations, portfolios, reflections, time constrained assessments, report writing and case studies. Students are expected to apply knowledge and theory explored in the modules and produce assessments that simultaneously focus on real business situations and indicate the requisite levels of academic rigour required at levels 4 – 6.

The programme culminates in the submission of the independent study assessment that builds upon content examined and skills developed in the taught modules.
